

# **Inspection Report**

#### General

То:		Customer:	
Vessel name:		IMO No.:	
Engineer:		Job No. :	SE-240628-46992
Date:	06/07/ 2024	Place:	Xiamen port

#### 1. Job description

Attended on board as per customer's requirement to carry out inspection of hatch covers at Xiamen port.

## 2. Equipment description

Hatch cover: Hydraulic end folding type hatch covers,1+2 panels for NO.1,2+2 panel for No.2-5, total 19 hatch panels for all 5 hatches.

Maker: Macgregor

#### 3. Report

The followings had been found during visit.

#### 3.1 Hatch cover panels

- The hatch cover skirt plate (lower part of hatch cover side plate) were corroded, suggest to be descaled and paint.Pic01
- Found 2 section of deformed rubber packing channel in No.1-1 portside ,to be repaired.

  And all the packing channel need to be descaled and paint after removed the rubber packing. Pic02
  - The packing channel need to be checked again after removed rubber packing and repair the corroded and deformed packing channel.
- The hatch cover panel joints structure in hinge joint and meeting joint for all 5 hatches were corroded, need to be sandblasted and paint. Pic03
- > 5pcs snug for quick acting cleats (near the wheel)were deformed. To be renewed. Location as below:Pic04
  - No.1 starboard side (panel 1-2) **1pc** No.2 portside Panel 2-2--**1pc** Panel 2-3 **1pc** No.4 portside Panel 4-2 **1pc** starboard panel 4-2 **1pc**
- All resting stools (mating plates) were corroded which will damaged the flexipad when closing . suggest to be de-rusted and painted .Pic05
- Hatch cover backside plate especially in No.1 were corroded, to be descaled and paint. Pic06

The hatch cover ventilation doors were corroded heavily ,suggest to remove all the ventilation doors for maintenance and renew the rubber packing. Pic07

#### 3.2 Sealing

- ➤ The permanent compression set of straight packing were 4-6mm, and the rubber packing in hinge joint were dirty with cement. Considering the bad condition of packing channel and flexipads need to be renewed and adjusted. Suggest to be renew all the rubber packing during dry dock. Pic08-09
- Rubber corners were deformed/damaged,and rubber corners in hinge joint were installed wrong with missing one flat corner. suggest to rectified during packing renewal.

Wrong installation --missing flat corner in hinge Joint

Correct packing installation with one flat corner and one L-standing corner

#### Notes for rubber packing installation:

- 1) Install rubber corner and rubber end first and then install straight rubber packing.
- 2) Straight pieces must to be cut to nominal length +1%. Suggest to fit straight rubber packing from bottom to the top when hatch cover opened in "A" position.packing joints should be applied with sikiaflex.
- 3) Do not mix up the different rubber corners.and straight packing were fixed length need to installed according to the drawing.
- Recommend to lubricate all rubber corner and end pieces by molykote/Vaseline always
- Hose test/ UT test should be carried out before ship departure from shipyard after repair.

#### 3.3 Bearing pad

- Steel to steel Flexipad pad system. The flexipads were checked and found damaged rubber skin and corrosion. Suggest to renew the flexipads according to the flexipads arrangement in final pages.and shim plate need to be prepared for the height adjustment of bearing pads during hatch cover final test. Pic10
  - Damaged Flexipads:LM 200-7pcs LM 350-20pcs LM 500-30pcs
  - The shim plates under the flexipads should keep the same thickness when flexipads

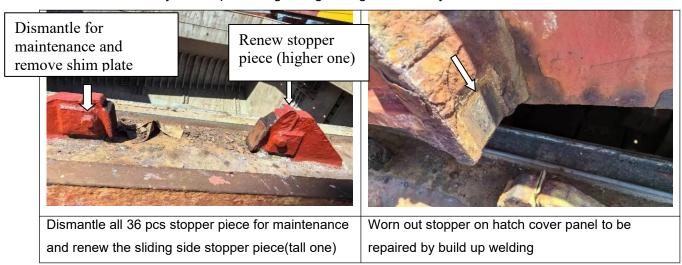

renewal.

All the mating plates should be de-rusted and paint to avoid damaged the rubber shin of flexipads.

#### 3.4 Coaming

- Coaming top were corroded, suggest to be sandblasted and paint. Pics 11
- Found 2pcs deformed cleat hole plate in No.4 portside & starboard side, suggest to be repaired by insert plate. Pics 12
- Found dent/deformation of compression bar in following position, suggest to be repaired.details as following: Pics 13
  - No.1 1section compression bar deformed need to be straightened.
  - No.5 Portside 1dent on center triangular piece need to be repaired by build up welding and grinding to smoothly.
- All the cleats were corroded heavily and the locking nut were unable to removed.
  Suggest to prepared some spare parts and cleat for renewal and maintenance during drydock. Pic14
- > The FY stopper were worn out ,Suggest to be repaired as following method
  - All the stopper piece(40pcs) on coaming to be removed and do maintenance and renew
    the sliding side stopper piece (higher one) .all the shim plates in the stopper piece to be
    removed and adjusted in hatch cover final test.
  - The FX stopper on hatch cover side suggest to be derusted and repaired the worn out area by build up welding and grinding to smoothly.

- The sliding surface need to be greased to reduce the worn down and smoothly operation.
- Wheel stopper in **No.1AS** and **No.5FS** were deformed/worn out suggest to be renewed.

  And the wheel stopper in starboard side were stuck, suggest to be free up. Pic15

- Running wheels especially flange wheels in No.5 portside were corroded heavily, suggest to be renewed. and other wheels need to be de-rusted and check again. The wasted flange wheel need to be renewed. Pic16
- All water drain valves to be removed or plug the drain pipes for protecting the valves from sands/ dirty during dock repair eg. sandblasting. Before ship sailing, all drainage valve to be fit back in position and remove the plug to ensure the water drainage be free.

### 3.5 Hydraulics & operational

- Checked the working pressure of 2 hydraulic pumps in power station, No.1 280bar,No.2 245 bar which were working in normal condition. Pic17
  - Found leaking from one plug of relief valve block ,suggest to be repaired.
- Hatch cover control stand working in normal condition, but the control valve block were rust, suggest to do necessary maintenance and renew the corroded emergency quick coupling ,pressure test nipple and pressure gauging hose. Pic18
- The ball valve under the hatch cover control stands were stuck and handle damaged. Suggest to be free up and renew the damaged handle. Pic19
- Found leaking of following hydraulic cylinder suggest to be overhauled. And the hydraulic cylinder body and air plug were corroded which need to be de-rusted and paint. Pic20
  3FP 3FS 3AP 4FS
- Found one leaking from hose adaptor in No.1FP hydraulic cylinder bottom, suggest to be repaired. Pic21
- The 2pcs warm up valve(bypass valve) were corroded and stuck and have leaking in aft suggest to renwal these 2 warm up valve in drydock.Pic22
- Found crack hydraulic hose in following position, need to be renewed immediately . and all the hose coupling were corroded. Suggest to prepare some spare hose and adaptor for emergency use. Pic23
  - No.1 AS & No.3 AS hydraulic cylinder -- 2hoses No.5 control stand 1hose
- The hydrauic pipes were corroded ,suggest to be derusted and paint. And the heavy corroded pipe need to be renewed during drydock. Pic24
- No.4 Fwd hatch cover were unable to open fully position, it caused by the worn out end hinges and cylinder hinges. After insert 8mm shim plate in the end hinge ,the hatch cover Can be fully open now. Pic25
- The top cylinder eye were worn out 5-6mm in following position, suggest to be repaired by build up welding and re-boring and missing bolt of key plates to be installed. Pic26

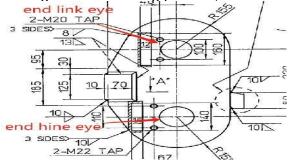

5mm worn: 1FP 1FS 2FS 2AP 5FP 5FS

6mm worn: 1AP 1AS 2FP

➤ End stopper pin in **No.1 FP & FS** were unable to be locked due to corroded ,suggest to de-rusted the pins and locking eyes to prevent hatch cover not closing during cargo operation. And support bracket of these 2 pins were deformed ,need to be renewed.Pic27

Found wear of end hinge link in following position, details as following:Pic 28

HC	location	FP	FS	AP	AS
No.1	End link eye	1	1	<mark>5mm</mark>	<mark>5mm</mark>
	End hinge eye	1	1	<mark>6mm</mark>	<mark>7mm</mark>
No.2	End link eye	<mark>7mm</mark>	3mm	<mark>5mm</mark>	<mark>6mm</mark>
	End hinge eye	<mark>2mm</mark>	2mm	1mm	<mark>6mm</mark>
No.3	End link eye	2mm	<mark>6mm</mark>	4mm	4mm
	End hinge eye	4mm	<mark>5mm</mark>	1mm	1mm
No.4	End link eye	<mark>5mm</mark>	<mark>5mm</mark>	<mark>4mm</mark>	4mm
	End hinge eye	<mark>6mm</mark>	<mark>9mm</mark>	<mark>5mm</mark>	0mm
No.5	End link eye	<mark>5mm</mark>	3mm	2mm	3mm
	End hinge eye	<mark>5mm</mark>	4mm	4mm	4mm

 Suggest to renew the end hinge link plate(total 10pcs) which were more than 5mm,locations as following: and the spherical bearing for end link pin need to be prepared during link plate renewal.

### No.1 AP AS No.2 FP AP AS No.3 FS No.4 FP FS AP No.5 FP

> Suggest to check all grease points (e.g. cylinder hinges, end hinges, intermediate hinges, wheels) to make sure they are still working well. If found the point is hard to apply grease, it to be dismantled for further checking and repairing.
